

Getting Started with HashiCorp Consul

Objective 4 - Lab Guide

1. Download the Consul-Template binaries from HashiCorp
 - a. `$ curl -silent -Lo /tmp/consul-template.zip`
`https://releases.hashicorp.com/consul-template/0.25.1/consul-template_0.25.1_linux_amd64.zip`
2. Unzip the downloaded file
 - a. `$ unzip consul-template.zip`
3. Move consul-template to PATH
 - a. `$ sudo mv consul-template /usr/local/bin`
4. Validate the installed version of Consul-Template
 - a. `$ consul-template -v`
5. Download/copy the consul-template file from GitHub
 - a. `https://github.com/btkrausen/hashicorp/blob/master/consul/config.json.tmpl`
6. Run the consul-template command
 - a. `$ consul-template -template "config.json.tmpl:config.json" -once`
7. Validate the new file contains the data retrieved from Consul
 - a. `$ vi config.json`
