

# Getting Started with HashiCorp Vault

## Objective 2 - Lab Guide

1. Check the status of the Consul cluster and list the server/client cluster members
  - a. `$ consul members`
2. Determine which agent is the cluster leader
  - a. `$ consul operator raft list-peers`
3. Join a node to the cluster manually using the CLI
  - a. `$ consul join <ip address or host name>`
4. Check the members of the cluster
  - a. `$ consul members`
5. Remove the local Consul agent from the cluster
  - a. `$ consul leave`
6. View the members of the cluster and note that the other server shows as 'left'
  - a. `$ consul members`
7. Forcefully remove a node from the cluster and remove from the consul members list
  - a. `$ consul force-leave -prune web-server-01`
