

Getting Started with HashiCorp Consul

Objective 8 - Lab Guide

1. Copy the token to the clipboard or have it readily available

a. `$ cat token.txt`

2. Validate the Consul KV pairs already in Consul

a. `$ consul kv get -recurse`

3. Use the API and the X-Consul-Token header to retrieve data from Consul and parse the response to jq to make it easier to read

a. `$ curl \`

`--header "X-Consul-Token: <token>" \`

`http://127.0.0.1:8500/v1/kv/apps/eCommerce/database_host | jq`

4. Use the API and the Authorization: Bearer header to retrieve data from Consul and parse the response to jq to make it easier to read

a. `$ curl \`

`--header "Authorization: bearer <token>" \`

`http://127.0.0.1:8500/v1/kv/apps/eCommerce/database_host | jq`
